SUMMARY

Software Engineer with experience building enterprise Java backend services, scalable file processing systems, and financial data applications at Fidelity Investments. Skilled in Spring Boot, REST APIs, AWS, Oracle, and Angular, with hands-on experience developing resilient backend workflows, optimizing large-scale data pipelines, and delivering production-ready enterprise software.

EDUCATION

BTech in Computer Science and Engineering, SRM institute of technology

Sept 2021-Graduated: July 2025

- **CGPA:** 9.38/10
- **Related Coursework:** Algorithms, Data Structures, Machine Learning, Cloud Computing

WORK EXPERIENCE

FIDELITY INVESTMENTS

Bangalore, India

Executive Graduate Trainee

Aug 2025-Present

- Developed and enhanced 10+ Java Spring Boot backend services supporting enterprise financial applications, enabling reliable processing of high-volume fixed-income data across multiple business workflows.
- Designed and maintained file processing pipelines for structured financial datasets, implementing validation, parsing, orchestration, and downstream integration to support 200K+ records per file while ensuring data integrity and operational reliability.
- Migrated and modernized 20+ REST APIs within the FFIO platform by implementing retry mechanisms, centralized exception handling, structured logging, and resilient processing logic, improving service reliability and simplifying production troubleshooting.
- Leveraged Spring Boot, Docker, Kubernetes, AWS, and Angular to build scalable backend solutions deployed within Fidelity's enterprise ecosystem.
- **Tech Stack:** Java, Spring Boot, MyBatis, Oracle, REST APIs, Angular, Docker, Kubernetes, AWS

Software Engineering Intern

Jan 2025-June 2025

- Automated data workflows by engineering a scalable file-orchestration pipeline using AWS S3 and EC2, eliminating manual data handling for files with 200K+ records and accelerating data availability for downstream systems.
- Empowered business users by developing a dynamic Ag-Grid dashboard to query and filter over 1M+ records in real-time, providing immediate access to critical data to support faster analysis and decision-making
- **Tech Stack:** Spring Boot, Angular, AWS S3, EC2, Bash, Oracle, PL/SQL

Summer Intern

June 2024-Aug 2024

- Engineered 8+ reusable Angular components, boosting frontend scalability and cutting UI development time 25%.
- Optimized backend queries by 30% through scalable data models and system architecture enhancements.
- **Tech Stack:** Angular, Spring Boot, Figma, Oracle

SAMSUNG R&D INSTITUTE

Chennai, India

R&D Intern

Oct 2023-Feb 2024

- Developed an Android app and REST APIs in Java for a **Camera Control Remote App**, integrating WebRTC to reduce streaming latency by 56% to 22ms, enabling 30fps real-time video.
- **Tech Stack:** Java, Android, WebRTC, MySQL

PROJECTS

SPARK- Smart parking system

- Built a mobile app for parking slot reservations, integrated with an admin dashboard for real-time monitoring.
- **Tech Stack:** React, Express, MongoDB Atlas

Investlytic - Stock Trading Platform

- Developed a Next.js-based platform with RL-driven recommendations, improving trading decision accuracy by 50%.
- **Tech Stack:** Next.js, Express, Python, Firebase

SKILLS

- **Programming Languages:** Java, Python, JavaScript, TypeScript
- **Backend Technologies:** Spring Boot, REST APIs, MyBatis, File Processing, Apache Spark ,Hive, Kafka, JMS Queue
- **Frontend Technologies:** Angular, React, Next.js, Flutter, React Native
- **Cloud & DevOps:** AWS (S3, EC2, IAM), Docker, Kubernetes, Jenkins
- **Databases:** Oracle, PostgreSQL, MongoDB, PL/SQL
- **Machine Learning:** TensorFlow, Scikit-learn, RAG, PyTorch , Stable-Baselines3.

LEADERSHIP & COMMUNITY

Leap Alumni Contributor | Fidelity Investments

- Delivered technical knowledge-sharing sessions on **GitHub Copilot**, demonstrating AI-assisted software development workflows and developer productivity best practices.
- Conducted **Level Up mentoring sessions** for incoming interns, introducing enterprise engineering practices, collaboration workflows, and modern development tools.
- Organized **three internal engagement events**, coordinating planning, communication, and cross-functional collaboration to improve team participation and culture.

PUBLICATIONS

Customized Investing in the Marketplace for Stocks using Deep Learning | SSRN Research Publication | 2025

- **Led the research**, system design, and implementation as the first author, **integrating LSTM, PPO, and financial market analytics** into a unified investment recommendation platform.
- Implemented machine learning workflows **for stock price prediction, portfolio optimization, and personalized recommendation generation** using Python.
- Evaluated model performance on historical market datasets to validate predictive capabilities and investment recommendations.
